RE: DOCKET NUMBER 16877

To Whom It May Concern:

It has recently come to my attention that the Center Road Pipeline Alternative 1 of the proposed Cabrillo Port LNG Deepwater Port plans call for running a 36-inch high pressure gas pipeline within less than one half mile of two schools in the Hueneme School District.

The Hueneme School District received no notice that the proposed pipeline would be so close to some of our schools. I have been informed that a pipeline of this magnitude may present some safety issues for our schools. I have also been informed that the project may be approved next week. I am requesting an extension of the public comment period in order to study these safety concerns. I am also requesting that you require the developer of the pipeline to conduct an environmental study that would be required of a school district by the State of California if the school district wanted to construct a school near this pipeline. We need to know if the state would approve a school site as close as ours are to the proposed pipeline before we can make a determination if we would support the project or not.

Thank you for considering these requests.

Sincerely,

Jerry Dannenberg, Ed.D
